

# MODEL SA-25

## Stump Grinder Attachment

Blow stumps away with Bandit's Model SA-25, a powerful stump grinder attachment that sits on the front of any skid-steer loader that accepts a universal attachment plate. Maintenance of the SA-25 is extremely simple because the unit operates on the skid steer's existing high-flow hydraulic system. The SA-25 increases the versatility of popular machines used all over the world. This easy-to-maintain design is effective on any stump, large and small.

### POWERFUL AND VERSATILE

- Easy to use with minimal upkeep
- Operates on any **high-flow hydraulic system**
- **Bandit power on a skid-steer loader**

### High Power With Low Maintenance

Bandit's hydrostatic direct-drive stump grinders are known to deliver superior performance with minimal maintenance, and the SA-25 gives operators plenty of stump-busting power with even less downtime. Don't worry about maintaining belts, sheaves and bearings associated with belt-drive stump grinders – maintenance is limited to greasing the unit and changing the teeth on the standard Revolution cutterwheel.

### If You Have a Skid-Steer Loader, You Can Have a Stump Grinder

The SA-25 mounts to the front of just about every make and model of skid-steer loader in seconds, turning that machine into a powerful Bandit® stump grinder. The SA-25 features a massive 24.5" diameter Revolution cutterwheel – the same size cutterwheel found on some of Bandit's largest self-propelled stump grinders. And when the job is done, the SA-25 quickly and easily detaches from the skid steer.

### Designed for convenience

A wide plow pushes chips while grinding, but it also acts as a heavy-duty support base. This distributes the weight of the SA-25 more evenly while grinding, helping take the load off the front of the skid-steer loader. And as the skid loader moves forward, the blade pushes chips into the hole left behind, reducing cleanup times to almost nothing.

### Specifications

#### Dimensions:

Length:	58.75"	Height:	30.75"
Width:	61"	Weight:	1,160 lbs.

#### Cutter Wheel System:

Cutterwheel Diameter:	24.25"	Cutter Teeth:	32
Cutterwheel Swing:	50"	Cutter Depth:	21.625"
Hydraulic High Flow:	30 - 50 GPM
